

NOTABLE COMPUTING BOOKS AND ARTICLES—2015

Computing Reviews is happy to bring you the 20th annual list of notable items published in computing—this time for 2015. We reached out to many in the computing community for nominations: our reviewers, *CR* category editors, the editors in chief of journals we cover, and computer scientists in both industry and academia. In addition, we included proceedings papers that were recognized as “Best Papers” at their respective conferences, as well as the most downloaded journal papers from some of the top journals covered in *CR*.

We received a total of 100 nominations, but excluded those that were self-nominations. In total, you will find 92 items on our list, with numerous publishers represented.

As we continue to improve our methods for collecting nominations and involve more of your peers in the computing community, we hope to bring you even more definitive lists in the coming years.

We welcome your feedback, and encourage you to email us with any questions (editorial@computingreviews.com).
